CAREER OBJECTIVE

B.Tech Information Technology graduate (Anurag University, 2026) who builds automation frameworks that actually run in CI — not just on a local machine. My Selenium WebDriver framework for SauceDemo runs thread-safe parallel tests across multiple browsers, feeds data from Excel via Apache POI, and deploys through a GitHub Actions pipeline on every push — built entirely without internship support or a team behind me. I have working knowledge of SDLC, STLC, manual testing, and defect lifecycle within Agile/Scrum environments using Jira. Looking to join a QA or SDET team as a fresher where I can apply what I have built, learn from experienced engineers, and grow into a well-rounded test engineer.

TECHNICAL SKILLS

Test Automation	Selenium WebDriver, TestNG, JUnit, Page Object Model (POM), Page Factory, ThreadLocal<WebDriver>, Data-Driven Testing, Cross-Browser Testing, WebDriverManager
Frameworks & CI	Maven, GitHub Actions CI/CD, ExtentReports, Apache POI, TestNG Listeners
Programming	Java, JavaScript, SQL, HTML, CSS, XPath, CSS Selectors
QA Methodologies	SDLC, STLC, Test Case Design, Bug Lifecycle, Agile/Scrum, Jira
Tools	Git, GitHub, Eclipse, VS Code, Automation Anywhere (RPA)

PROJECTS

Selenium Automation Framework — E-Commerce End-to-End Testing	2026
<i>Java · Selenium WebDriver · TestNG · Maven · Apache POI · ExtentReports · GitHub Actions</i>	
- Built a full E2E automation framework for SauceDemo covering login, product browsing, cart management, and complete checkout flows — automating 100% of critical user paths. - Engineered thread-safe parallel execution using <code>ThreadLocal<WebDriver></code>, enabling concurrent multi-browser runs with zero shared state or race conditions. - Implemented Page Object Model with Page Factory across 5 dedicated page classes, achieving zero locator duplication and significantly reducing test maintenance overhead. - Integrated data-driven testing via TestNG <code>@DataProvider</code> and Apache POI, fully decoupling test data from test logic for parameterised execution without code changes. - Configured GitHub Actions CI/CD pipeline to run all tests in headless Chrome on every push and auto-upload ExtentReports HTML artifacts with failure screenshots and timestamped logs.	
TEST-AutoMATES — Workflow Automation and Smart Task Execution	2025
<i>Java · Maven · TestNG · Git · GitHub · Jira · Agile/Scrum</i>	
- Automated repetitive software workflows — user login, form submission, data validation, and task status updates — cutting manual verification effort across repeated test cycles. - Structured the codebase into 3 clean layers (src/main, src/test, docs), fully separating automation logic, test scripts, and documentation for independent extensibility. - Wrote TestNG assertions to validate actual system outputs against expected results, with descriptive failure messages that pinpoint root cause without manual log digging. - Tracked 10+ tasks via GitHub Issues and ran the project across Agile/Scrum sprints, simulating a real team QA workflow from planning through execution to closure.	

EDUCATION

Anurag University	Hyderabad, India
<i>B.Tech — Information Technology — CGPA: 7.82 / 10</i>	<i>2022 – Apr 2026</i>
SR Junior College	Hyderabad, India
<i>Intermediate — 12th Grade — Marks: 937 / 1000</i>	<i>2020 – 2022</i>
Sri Chaitanya Techno School	Hyderabad, India
<i>Secondary School — 10th Grade — CGPA: 10.0 / 10</i>	<i>2020</i>

CERTIFICATIONS

- Automation Anywhere — Robotic Process Automation • Cisco — Data Analytics and Python

CORE COMPETENCIES

Test Automation	TestNG / JUnit	Parallel Execution	Agile / Scrum
Selenium WebDriver	Page Object Model	Cross-Browser Testing	SDLC / STLC
Java Programming	CI/CD Pipelines	Defect Management	GitHub Actions
