PROFESSIONAL SUMMARY

QA Automation Engineer (B.Tech IT, 2026) who builds and maintains Java/Selenium test frameworks from scratch – Page Object Model, TestNG, data-driven and parallel execution, and CI/CD reporting. Comfortable across manual and automated testing: writing test cases, executing regression cycles, tracking defects, and reading logs to isolate root cause. Looking for an entry-level QA Automation Engineer, SDET, or Test Engineer role where I can own test coverage for a real product.

TECHNICAL SKILLS

Programming: Java, JavaScript, SQL, HTML, CSS

Test Automation: Selenium WebDriver, TestNG, JUnit 5, Page Object Model, Page Factory, Data-Driven Testing, Cross-Browser Testing, Parallel Testing, ThreadLocal WebDriver

Software Testing: Manual Testing, Functional Testing, Smoke Testing, Sanity Testing, Regression Testing, Test Case Design, Defect Lifecycle, Failure Analysis

Tools: Maven, Git, GitHub, Jira, Eclipse, VS Code

Frameworks & Reporting: GitHub Actions, ExtentReports, Apache POI, Jackson, SLF4J, Log4j2

Web Technologies: XPath, CSS Selectors, WebElements, Explicit Waits

Methodologies: SDLC, STLC, Agile, Scrum, CI/CD

PROJECTS

Selenium Automation Framework – E-Commerce End-to-End Testing Individual Project · 2026

Java, Selenium WebDriver, TestNG, Maven, Page Object Model, Page Factory, Apache POI, ExtentReports, GitHub Actions

- Built a Page Object Model + Page Factory framework for SauceDemo with **11 test methods** across Login, Home, Product, and Checkout flows, including invalid/locked-user negative scenarios.
- Organized tests into smoke and regression TestNG groups, producing **17 test executions per run with a 100% pass rate** (0 failures) verified through GitHub Actions.
- Implemented cross-browser support (**Chrome, Firefox, Edge**) via WebDriverManager, plus headless execution for CI.
- Set up ThreadLocal WebDriver with TestNG parallel execution (**2 threads**, `parallel="methods"`) for thread-safe concurrent test runs.
- Data-drove login validation off Excel via TestNG DataProvider and Apache POI across **3 credential sets**, with explicit waits and automatic failure screenshots on every test.
- Wired ExtentReports and GitHub Actions so every push runs the full suite on Chrome/Ubuntu and publishes an HTML report automatically.

TEST-AutoMATES – Java Automation and Task Execution Framework Individual Project · 2025

Java 11, Maven, JUnit 5, Jackson, Java NIO, SLF4J, Log4j2, Git, GitHub Actions

- Designed a reusable task-execution engine (Scheduler → Executor → Task → Report) supporting pluggable automation tasks, including file cleanup and JSON validation.
- Implemented configurable retry handling in the executor, verified via unit tests to correctly recover a task after repeated failures before succeeding.
- Wrote **18 JUnit 5 tests** covering the engine, scheduler, executor, both task types, and report generator, plus an end-to-end integration test – **100% pass rate** (0 failures, 0 errors) on every run.
- Added structured logging (SLF4J + Log4j2) and a custom HTML report generator to surface task status, messages, and execution time per run.
- Configured a GitHub Actions pipeline to build with Maven, run the full test suite, and publish Surefire test reports as artifacts on every push.

EDUCATION

Anurag University	B.Tech – Information Technology	CGPA: 7.82 / 10	2022–2026
SR Junior College	Intermediate – 12th Grade	932 / 1000	2020–2022
Sri Chaitanya Techno School	Secondary School – 10th Grade	10.0 / 10 CGPA	2020

CERTIFICATIONS

- Automation Anywhere – Robotic Process Automation
